Scoring: Fisher's 15 Points (max 30) + 5 modern overlays (max 10) = combined score out of 40. 34-40 Fisher-grade compounder; 27-33 Strong candidate; 20-26 Watchlist; below 20 or gate FAIL does not meet Fisher's standard. Calls: LONG = quality at a fair or attractive price; PASS = wait for a better price or more evidence;

AVOID = fails the standard or the gate.

Commentary

Tally: 7 LONG, 9 PASS, 3 AVOID.

Highest quality: ISRG (37/40), MSFT (35/40) and AAPL (34/40) are the three Fisher-grade compounders. ISRG and MSFT are LONG (8/10, core size) at fair prices. AAPL is the only compounder rated PASS on price: at 37.1x FY2027E EPS the base case returns only +1.4%/yr.

Other LONGs (starter size): GOOGL (7/10), AMZN, AVGO, CRM and NVDA (6/10 each), all Strong candidates at fair or attractive prices. CRM is the cheapest at 14.3x FY2028E EPS with an ~8% FCF yield.

Great business, wrong price: CRWD (160x FY2028E EPS), MDB (48x) and QCOM (18x for a shrinking handset core) are Strong candidates rated PASS until the price improves.

Gate flags: COHR, ORCL and NVTS are FLAGged because growth is being funded with outside capital or dilution (Point 13). ORCL shows the highest base return (+20.6%/yr) only if its financing plan works.

Gate failures: SPCX and TSLA fail on management integrity (Point 15), so price does not matter until governance is fixed.

Watch dates: AVGO, GOOGL and NVDA were last run on October 28, 2026, so their prices and returns are one day older than the rest. GOOGL's base case is +10.5%/yr at its October 28 quote, or +13.2% from the ~$288 after-hours price.
